PROFESSIONAL SUMMARY

- A certified and skilled full stack and eLearning web developer
- Experienced in Google Workspace, including the Google Admin Console
- Managed DNS and websites for freelance clients using Google Cloud
- Worked in a remote environment for three years, demonstrated self starter
- Emphasizes the need to ensure clarity when communicating with team members that have limited technical experience, ensuring their needs are met and requests are translated into the final product
- Communicates time sensitive information clearly and effectively to address needs and create avenues for next steps in creative problem solving

QUALIFICATIONS

- Full stack web developer (Full stack certification)
- Proficient in HTML5, CSS, and JavaScript; experience with cloud based backend development with Google Cloud
- Three years of professional experience in the tech and eLearning sector, working with companies such as Amazon, T-Mobile, and Microsoft
- Familiarity with current cutting edge technologies such as JS frameworks (React, VueJS)
- Understanding of modern accessibility requirements (WCAG 2.0)
- Experience with web development in higher education

RELEVANT SKILLS AND ACCOMPLISHMENTS

TECHNICAL SKILLS

- Five years of experience with: HTML5, CSS, Javascript, PHP, ReactJS, Vue3, Python 3, Git, SQL Databases, SCSS/SASS, Flexbox, CSS Grid, Google Firebase and Firestore, YAML
- Experience with CMS systems within a higher education setting (Snow College)
- Experience working in tech regarding social issues, volunteered my time to build a website for a community based domestic and sexual violence organization
- Experience in transforming written content into engaging multimedia experiences (eLearning)
- Able to translate technical information into information for non-technical colleagues

SOFT SKILLS

- Excellent communication and collaboration skills
- Active involvement in deepening my own cultural humility and awareness of my personal behaviors and their impact in organizational systems
- Leadership in a tech environment, advocate for accessibility and representation in technology and communications to diverse corporate audiences

- Experience in a project based environment, with collaboration between designers, writers and subject matter experts
- Passion for social justice, community organizing and activism, experienced in leading nuanced, productive conversations about inequities, disparities and the need for social change

PROFESSIONAL EXPERIENCE

- **Sublime Media**, *Web and eLearning Developer*

09/27/2021-03/15/2024

I worked at Sublime Media as a developer in Articulate Storyline 360 and their in-house JavaScript framework, based in VueJS. I worked on projects for T-Mobile, Amazon, and Microsoft. These projects consist of building training applications and software for these companies, and are used to help onboard new hires, inform on policy, and generally present relevant information as determined by Subject Matter Experts (SME's). My time with Sublime was an amazing experience where I learned how to manage my own time in a remote environment, execute on projects in a collaborative way with art and motion design, instructional design, and client facing meetings. I became familiar with the Adobe Suite, especially Illustrator, to collaborate with the project team on creating dynamic and engaging online training. Sublime emphasized the importance of accessible web development and diverse representation and inclusion in our content. We used Git to manage version control, and collaborate on code within a small team of three developers.

Here is a link to some of my Articulate Storyline work, stripped of relevant branding:

- **Snow College**, *Website Management Intern*

05/10/2021-09/01/2021

I joined with the head web developer at Snow College to help maintain and expand Snow College's website. I became familiar and comfortable with the OmniCMS content management system. I have primarily helped to move outdated content into the CMS, as well as transfer content behind an authentication wall. This entailed leveraging PHP and JS to

update content. This overall improved accessibility of pertinent information of university facilities and services for students and faculty.

- **Canyon Creek Services, *Full Stack Developer***

January-April 2021

I volunteered for Canyon Creek Services, a community based organization serving survivors of domestic and sexual violence, to build them a new website. This entailed working alongside their in-house graphic designer, implementing her designs, building a website manager, creating a backend database and hosting in Google's Firebase. This replaced their old website, and granted better access to the essential services provided by this incredible organization.

- **Freelance Web Developer**

May-September 2021

I spent several months as a freelance web developer while I interned at Snow College. My favorite project was building a web application for a friend to showcase her artwork. It includes a full site manager, and interacts with a backend to retrieve images of her art and dynamically display it.

EDUCATION, LICENSES, AND CERTIFICATIONS

- **Bachelor's Degree, Southern Utah University, Cedar City, Utah** 2017-2020

I studied History and Philosophy at SUU and graduated in 2020. I took two years of classical Greek and translated numerous works of Greek philosophy into English. I also had the opportunity to study formal logic. My area of expertise in philosophy is social and political philosophy, granting me a big picture understanding and appreciation for the core concepts around issues impacting marginalized groups.

- **Full Stack Developer Certificate, Bottega University**

2020-2021

After graduating from SUU, I decided to diversify my skill set by pursuing a web development certificate. Bottega helped to give me the skills to build amazing websites and write clean, object-oriented code.
